VALUE PROPOSITION AND MVP

Together they make the Business Model Canvas

A business model describes the rationale of how an organization creates, delivers, and captures value

The 9 Building blocks (1/3)

1

CS: Customer Segments

An organization serves one or several **Customer Segments**

2

VP: Value Propositions

It seeks to solve customer problems and satisfy customer needs with **Value Propositions**

3

CH: Channels

Value propositions are delivered to customers through communications, distribution, and sales **Channels**

The 9 Building blocks (2/3)

4

CR: Customer Relationships →

Customer Relationships are established and maintained with each Customer Segment

5

R\$: Revenue Streams →

Revenue Streams result from value propositions successfully offered to customers

6

KR: Key Resources →

Key Resources are the assets required to offer and deliver the previously described elements ...

The 9 Building blocks (3/3)

7

KA: Key Activities

... by performing a number of **Key Activities**

8

KP: Key Partnerships

Some activities are outsourced and some resources are acquired outside the enterprise

9

C\$: Cost Structure

The business model elements results in the **Cost Structure**

*Key
Partners*

*Key
Activities*

*Value
Proposition*

*Customer
Relationships*

*Customer
Segments*

*Key
Resources*

Channels

*Cost
Structure*

*Revenue
Streams*

Together they make the Business Model Canvas

CS

Customer Segments

The Customer Segments Building block defines
**the different groups of people or
organizations an enterprise aims to reach and
serve**

Customer Segments

A company **may** group customers into distinct segments with:

- common **needs**
- common **behaviors**
- other **attributes**

Business model **may** define one or several large or small Customer Segments

An organization **must** make a conscious decision about which segments **to serve** and which segments **to ignore**

Once this decision is made, a business model can be carefully designed around a strong understanding of **specific customer needs**

Customer groups represent **separate segments** if:

- ➡ **Their needs** require and justify a distinct offer
 - ➡ They are reached through **different Distribution Channels**
 - ➡ They require **different types of relationships**
 - ➡ They have substantially **different profitability**
 - ➡ They are willing to pay for **different aspects of the offer**
-

Key questions

- For whom are we creating value?
- Who are our most important customers?

There are different types of Customer Segments.

Different types of Customer Segments (1/3)

Segment type	Description
Mass market	Business model focused on mass markets don't distinguish between different Customer Segments. Channels and Customers Relationships all focus on one large group of customers with broadly similar needs and problems.
Niche market	Business models targeting niche markets is specific, specialized on a Customer Segments. The Value Propositions, Distribution Channels, and Customer Relationships are all tailored to the specific requirements of a niche market. Such business models are often found in supplier-buyer relationships. For example, many car part manufacturers depend heavily on purchases from major automobile manufacturers.

Different types of Customer Segments (2/3)

Segment type	Description
Segmented	Some business models distinguish between market segments with slightly different needs and problems. The retail arm of a bank like Credit Suisse, for example, may distinguish between a large group of customers, each possessing assets of up to U.S. \$100,000, and a smaller group of affluent clients, each of whose net worth exceeds U.S. \$500,000. Both segments have similar but varying needs and problems.
Diversified	An organization with a diversified customer business model serves two unrelated Customer Segments with very different needs and problems. For example, Amazon.com decided to diversify its retail business by selling "cloud computing" services: online storage space and on-demand server usage. Thus it started catering to a totally different Customer Segment, Web companies, with a totally different Value Proposition.

Different types of Customer Segments (3/3)

Segment type	Description
Multi-sided platforms (or multi-sided markets)	A credit card company, for example, needs a large base of credit card holders and a large base of merchants who accept those credit cards. Similarly, an enterprise offering a free news-paper needs a large reader base to attract advertisers. On the other hand, it also needs advertisers to finance production and distribution. Both segments are required to make the business model work.

Together they make the Business Model Canvas

2

VP

Value Propositions

Value Proposition

The Value Proposition is the reason **why** customers turn to one company over another.

It solves a customer
problem ...

... or satisfies a customer
need.

Each Value Proposition consists of a **selected bundle of products and/or services** that caters to the **requirements** of a specific Customer Segment.

In this sense, the Value Proposition is **an aggregation, or bundle, of benefits** that a company offers customers.

What is a Value Proposition?

Value Proposition

the sum of the benefits that the organisation promises to deliver to its customers (**the Job to be done**) through its offering, whether products, services or both, for which customers are willing to pay

5 Key Questions you need to answer for EACH product / service in your portfolio

Question 1

What is the product's scope and uses? What are its key features?

- ***This will*** define the boundaries of the company's market and clarifying in which markets the company is currently competing.

Question 2

Who is this product aimed at? Where are they?

- *This will* define the different market segments served by the company
- *In which market* are customer to be found?

Question 3

What need does our product addresses? What problem is it trying to solve? Is it a significant problem for the customer? To what extent does the product addresses the problem?

- *This will clarify* the problem that the product or services is trying to solve, or the need it is designed to meet. (e.g. Job of a Milkshake, Apple & its crossovers)

Question 4

How is the product delivered to the customer?

How do customers find out about the product ?

Which distribution channels do you utilise?

- *This will help define* how the value proposition will be delivered (eg. Four Seasons Hotel)

Question 5

What is the product's price position?

- *This will help* define the price to a value proposition which in turn easily triggers intuitive decisions on the part of customers

You have a value proposition only if....

$$\mathbf{C} < \mathbf{P} < \mathbf{V}$$

Total cost of the
product/service
(production,
distribution, etc...)

Customer net
price (after
discount)

Customer perceived
value

Value Propositions: Definition

The Value Propositions Building Block describes the bundle of products and services that create value for a specific Customer Segment

Key questions

- What value do we deliver to the customer?
- Which one of our customer's problems are we helping to solve?
- Which customer needs are we satisfying?
- What bundle of products and services are we offering to each Customer Segment?

A Value Proposition creates value for a Customer Segment through a distinct mix of elements catering to that segment's needs.

Elements catering to segment's needs

Values may be

quantitative

e.g. price, speed of service

qualitative

e.g. design, customer experience

Elements from the following non-exhaustive list can contribute to customer value creation.

Elements description (1/5)

Element	Description
Newness	Cell phones, for instance, created a whole new industry around mobile telecommunication. On the other hand, products such as ethical investment funds have little to do with new technology.
Performance	Improving product or service performance has traditionally been a common way to create value. The PC, faster PCs, more disk storage space, and better graphics have failed to produce corresponding growth in customer demand.
Customization	Tailoring products and services to the specific needs of individual customers or Customer Segments creates value. In recent years, the concepts of mass customization and customer co-creation have gained importance. This approach allows for customized products and services, while still taking advantage of economies of scale.

Elements description (2/5)

Element	Description
“Getting the job done”	Value can be created simply by helping a customer get certain jobs done. Rolls-Royce understands this very well: its airline customers rely entirely on Rolls-Royce to manufacture and service their jet engines. This arrangement allows customers to focus on running their airlines. In return, the airlines pay Rolls-Royce a fee for every hour an engine runs.
Design	Design is an important but difficult element to measure. A product may stand out because of superior design. In the fashion and consumer electronics industries, design can be a particularly important part of the Value Proposition.
Brand/Status	Customers may find value in the simple act of using and displaying a specific brand. Wearing a Rolex watch signifies wealth, for example. On the other end of the spectrum, skateboarders may wear the latest “underground” brands to show that they are “in.”

Elements description (3/5)

Element

Description

Price

Offering similar value at a lower price is a common way to satisfy the needs of price-sensitive Customer Segments. But low-price Value Propositions have important implications for the rest of a business model. No frills airlines, such as Southwest, easyJet, and Ryanair have designed entire business models specifically to enable low cost air travel.

Another example of a price-based Value Proposition can be seen in **the Nano, a new car designed and manufactured by the Indian conglomerate Tata.**

Cost reduction

Helping customers reduce costs is an important way to create value. **Salesforce.com**, for example, sells a hosted Customer Relationship management (CRM) application. This relieves buyers from the expense and trouble of having to buy, install, and manage CRM software themselves.

Elements description (4/5)

Element	Description
Risk reduction	Customers value reducing the risks they incur when purchasing products or services. For a used car buyer, a one-year service guarantee reduces the risk of post-purchase breakdowns and repairs. A service-level guarantee partially reduces the risk undertaken by a purchaser of outsourced IT services.
Accessibility	Making products and services available to customers who previously lacked access to them is another way to create value. This can result from business model innovation, new technologies, or a combination of both. NetJets, for instance, popularized the concept of fractional private jet ownership. Using an innovative business model, NetJets offers individuals and corporations access to private jets, a service previously unaffordable to most customers. Mutual funds provide another example of value creation through increased accessibility. This innovative financial product made it possible even for those with modest wealth to build diversified investment portfolios.

Elements description (5/5)

Element	Description
Convenience/Usability	Making things more convenient or easier to use can create substantial value. With iPod and iTunes, Apple offered customers unprecedented convenience searching, buying, downloading, and listening to digital music. It now dominates the market.

Together they make the Business Model Canvas

3

CH

Channels

The Channels Building Block describes how a company communicates with and reaches its Customer Segments to deliver a Value Proposition

Channels serve **several functions**, including:

Raising awareness among customers about a company's products and services

Helping customers **evaluate** a company's Value Proposition

Allowing customers to **purchase** specific products and services

Delivering a **Value Proposition** to customers

Providing post-purchase customer **support**

Key questions

- Through which Channels do our Customer Segments want to be reached? (heard/see/do)
- How are we reaching them now?
- How are our Channels integrated?
- Which ones work best? (efficiency/cost)

Between direct Channels and indirect ones, as well as between owned Channels and partner Channels.

Right mix of Channels

Finding the **right mix of Channels** to satisfy how customers want to be reached is crucial in bringing a Value Proposition to market.

Channel Types but also communication channel

Channel Types			Channel Phases				
Own	Direct	Sales force	1. Awareness How do we raise awareness about our company's products and services?	2. Evaluation How do we help customers evaluate our organization's Value Proposition?	3. Purchase How do we allow customers to purchase specific products and services?	4. Delivery How do we deliver a Value Proposition to customers?	5. After sales How do we provide post-purchase customer support?
		Web sales					
Partner	Indirect	Own stores					
		Partner stores					
		Wholesaler					

Together they make the Business Model Canvas

4

CR

Customer Relationships

The Customer Relationships Building Block describes the types of relationships a company establishes with specific Customer Segments

Customer relationships **may be driven** by the following motivations:

 Customer **acquisition**

 Customer **retention**

 **Boosting** sales (upselling)

In the early days, for example, mobile network operator Customer Relationships were driven by aggressive acquisition strategies involving free mobile phones. When the market became saturated, operators switched to focusing on customer retention and increasing average revenue per customer.

Key questions

- What type of relationship does each of our Customer Segments expect us to establish and maintain with them?
- Which ones have we established?
- How costly are they?
- How are they integrated with the rest of our business model?

We can distinguish between several categories of Customer Relationships, which may co-exist in a company's relationship with a particular Customer Segment.

Customer Relationships (1/3)

Element	Description
Personal assistance	This relationship is based on human interaction. The customer can communicate with a real ASSISTANCE representative to get help during the sales process or after the purchase is complete. This may happen on-site at the point of sale, through call centers, by e-mail, or through other means.
Dedicated personal assistance	This relationship involves dedicating a customer representative specifically to an individual client. It represents the deepest and most intimate type of relationship and normally develops over a long period of time. In private banking services, for example, dedicated bankers serve high net worth individuals.
Self-service	In this type of relationship, a company maintains no direct relationship with customers. It provides all the necessary means for customers to help themselves.

Customer Relationships (2/3)

Element	Description
Automated services	This type of relationship mixes a more sophisticated form of customer self-service with automated processes. For example, personal online profiles give customers access to customized services. Automated services can recognize individual customers and their characteristics, and offer information related to orders or transactions. At their best, automated services can simulate a personal relationship.
Communities	Increasingly, companies are utilizing user communities to become more involved with customers/prospects and to facilitate connections between community members. Many companies maintain online communities that allow users to exchange knowledge and solve each other's problems. Communities can also help companies better understand their customers. Pharmaceutical giant GlaxoSmithKline launched a private online community when it introduced ALLI, a new prescription-free weight-loss product.

Customer Relationships (3/3)

Element	Description
Co-creation	More companies are going beyond the traditional customer-vendor relationship to co-create value with customers. Amazon.com invites customers to write reviews and thus create value for other book lovers. Some companies engage customers to assist with the design of new and innovative products. Others, such as YouTube.com, solicit customers to create content for public consumption.

Together they make the Business Model Canvas

R\$

Revenue Streams

Revenue Streams: Definition

The Revenue Streams Building Block represents the cash a company generates from each Customer Segment (costs must be subtracted from revenues to create earnings)

A business model **can involve** two different types of Revenue Streams:

- ➡ Transaction revenues resulting from **one-time customer payments**
- ➡ Recurring revenues resulting from **ongoing payments** to either **deliver a Value Proposition** to customers or **provide post-purchase** customer support

A company must ask itself

For what value is each Customer Segment truly willing to pay?

Successfully answering that question allows the firm to generate one or more Revenue Streams from each Customer Segment. Each Revenue Stream may have different pricing mechanisms, such as fixed list prices, bargaining, auctioning, market dependent, volume dependent, or yield management.

Key questions

- For what value are our customers really willing to pay?
- For what do they currently pay?
- How are they currently paying? How would they prefer to pay?
- How much does each Revenue Stream contribute to overall revenues?

There are several ways to generate Revenue Streams

Revenue streams generation (1/3)

Element	Description
Asset sale	Amazon.com sells books, music, consumer electronics, and more online. Fiat sells automobiles, which buyers are free to drive, resell, or even destroy.
Usage fee	This Revenue Stream is generated by the use of a particular service. The more a service is used, the more the customer pays. A Telecom operator may charge customers for the number of minutes spent on the phone. A hotel charges customers for the number of nights rooms are used. A package delivery service charges customers for the delivery of a parcel from one location to another.
Subscription fees	This Revenue Stream is generated by selling continuous access to a service. A gym sells its members monthly or yearly subscriptions in exchange for access to its exercise facilities. World of Warcraft Online, a Web-based computer game, allows users to play its online game in exchange for a monthly subscription fee. Nokia's Comes with Music service gives users access to a music library for a subscription fee.

Revenue streams generation (2/3)

Element	Description
Lending/Renting/Leasing	This Revenue Stream is created by temporarily granting someone the exclusive right to use a particular asset for a fixed period in return for a fee. Zipcar.com provides a good illustration. The company allows customers to rent cars by the hour in North American cities. Zipcar.com's service has led many people to decide to rent rather than purchase automobiles.
Licensing	This Revenue Stream is generated by giving customers permission to use protected intellectual property in exchange for licensing fees. Licensing allows rights-holders to generate revenues from their property without having to manufacture a product or commercialize a service. Licensing is common in the media industry.

Revenue streams generation (3/3)

Element	Description
Brokerage fees	This Revenue Stream derives from intermediation services performed on behalf of two or more parties. Credit card providers, for example, earn revenues by taking a percentage of the value of each sales transaction executed between credit card merchants and customers.
Advertising	This Revenue Stream results from fees for advertising a particular product, service, or brand. Traditionally, the media industry and event organizers relied heavily on revenues from advertising. In recent years other sectors, including software and services, have started relying more heavily on advertising revenues.

Pricing Mechanisms

Each Revenue Stream might have **different pricing mechanisms**. The type of pricing mechanism chosen can make a big difference in terms of revenues generated. There are two main types of pricing mechanism: **fixed and dynamic pricing**.

Fixed Menu Pricing Predefined prices are based on static variables	Dynamic Pricing Prices change based on market conditions
<i>List price</i> —Fixed prices for individual products, services, or other Value Propositions	<i>Negotiation (bargaining)</i> —Price negotiated between two or more partners depending on negotiation power and/or negotiation skills
<i>Product feature dependent</i> —Price depends on the number or quality of Value Proposition features	<i>Yield management</i> —Price depends on inventory and time of purchase (normally used for perishable resources such as hotel rooms or airline seats)
<i>Customer segment dependent</i> —Price depends on the type and characteristic of a Customer Segment	<i>Real-time-market</i> —Price is established dynamically based on supply and demand
<i>Volume dependent</i> —Price as a function of the quantity purchased	<i>Auctions</i> —Price determined by outcome of competitive bidding

Together they make the Business Model Canvas

KR

Key Resources

Key Resources: Definition

The Key Resources Building Block describes the most important assets required to make a business model work

Every business model **requires** Key Resources.

These resources allow an enterprise to create and offer a Value Proposition, reach markets, maintain relationships with Customer Segments, and earn revenues.

Key questions

- What Key Resources do our Value Propositions require?
- Our Distribution Channels?
- Customer Relationships?
- Revenue Streams?

Key Resources can be categorized as follows

Key Resources categories (1/2)

Element

Description

Physical

This category includes physical assets such as manufacturing facilities, buildings, vehicles, machines, systems, point-of-sales systems, and distribution networks. Retailers like Wal-Mart and Amazon.com rely heavily on physical resources, which are often capital-intensive. The former has an enormous global network of stores and related logistics infrastructure. The latter has an extensive IT, warehouse, and logistics infrastructure.

Intangible

Intellectual resources such as brands, proprietary knowledge, patents and copyrights, partnerships, and customer databases are increasingly important components of a strong business model. Intellectual resources are difficult to develop but when successfully created may offer substantial value. Consumer goods companies such as Nike and Sony rely heavily on brand as a Key Resource. Microsoft

Key Resources categories (2/2)

Element	Description
Human	Every enterprise requires human resources, but people are particularly prominent in certain business models. Novartis, for example, relies heavily on human resources: Its business model is predicated on an army of experienced scientists and a large and skilled sales force.
Financial	Some business models call for financial resources and/or financial guarantees, such as cash, lines of credit, or a stock option pool for hiring key employees. Ericsson

Together they make the Business Model Canvas

7

KA

Key Activities

Key Activities: Definition

The Key Activities Building Block describes the most important things a company must do to make its business model work

Every business model **calls for** a number of Key Activities.

These are the most important actions a company must take to operate successfully. Like Key Resources, they are required to create and offer a Value Proposition, reach markets, maintain Customer Relationships, and earn revenues.

Key Activities differ depending on business model type

For software maker Microsoft
Key Activities include
software development

For PC manufacturer Dell
Key Activities include
supply chain management

For consultancy McKinsey
Key Activities include
problem solving

Key questions

- What Key Activities do our Value Propositions require?
- Our Distribution Channels?
- Customer Relationships?
- Revenue Streams?

Key Activities can be categorized as follows

Key Activities categories (1/2)

Element	Description
Production	These activities relate to designing, making, and delivering a product in substantial quantities and/or of superior quality. Production activity dominates the business models of manufacturing firms.
Problem solving	Key Activities of this type relate to coming up with new solutions to individual customer problems. The operations of consultancies, hospitals, and other service organizations are typically dominated by problem solving activities. Their business models call for activities such as knowledge management and continuous training.

Key Activities categories (2/2)

Element	Description
Platform/Network	Business models designed with a platform as a Key Resource are dominated by platform or network-related Key Activities. Networks, matchmaking platforms, software, and even brands can function as a platform. eBay's business model requires that the company continually develop and maintain its platform: the Web site at eBay.com. Visa's business model requires activities related to its Visa® credit card transaction platform for merchants, customers, and banks. Microsoft's business model requires managing the interface between other vendors' software and its Windows® operating system platform. Key Activities in this category relate to platform management, service provisioning, and platform promotion.

Together they make the Business Model Canvas

8

KP

Key Partnerships

Key Partnerships: Definition

The Key Partnerships Building Block describes the network of suppliers and partners that make the business model.

Companies forge partnerships for many reasons, and partnerships are becoming a **cornerstone** of many business models.

We can distinguish between four different types of partnerships

➡ **Strategic alliances** between non-competitors

➡ **Coopetition**: strategic partnerships between competitors

➡ **Joint ventures** to develop new businesses

➡ **Buyer-supplier** relationships to assure reliable supplies

Key questions

- Who are our Key Partners?
- Who are our key suppliers?
- Which Key Resources are we acquiring from partners?
- Which Key Activities do partners perform?

It can be useful to distinguish between three motivations for creating partnerships.

Motivations for creating partnerships (1/2)

Element

Description

Optimization and economy of scale

The most basic form of partnership or buyer-supplier relationship is designed to optimize the allocation of resources and activities. It is illogical for a company to own all resources or perform every activity by itself. Optimization and economy of scale partnerships are usually formed to reduce costs, and often involve outsourcing or sharing infrastructure.

Reduction of risk and uncertainty

Partnerships can help reduce risk in a competitive environment characterized by uncertainty. It is not unusual for competitors to form a strategic alliance in one area while competing in another. Blu-ray, for example, is an optical disc format jointly developed by a group of the world's leading consumer electronics, personal computer, and media manufacturers. The group cooperated to bring Blu-ray technology to market, yet individual members compete in selling their own Blu-ray products.

Motivations for creating partnerships (2/2)

Element	Description
Acquisition of particular resources and activities	Few companies own all the resources or perform all the activities described by their business models. Rather, they extend their own capabilities by relying on other firms to furnish particular resources or perform certain activities. Such partnerships can be motivated by needs to acquire knowledge, licenses, or access to customers. A mobile phone manufacturer, for example, may license an operating system for its handsets rather than developing one in-house. An insurer may choose to rely on independent brokers to sell its policies rather than develop its own sales force.

Together they make the Business Model Canvas

9

C\$

Cost Structure

Cost Structure: Definition

The Cost Structure describes all costs incurred to operate a business model

This building block describes the **most important costs** incurred while operating under a particular business model.

Companies create alliances to **optimize** their business models, **reduce** risk, or **acquire** resources.

Such costs can be calculated relatively easily after defining

Key Resources

Key Activities

Key Partnerships

Some business models, though, are more cost-driven than others. So-called “no frills” airlines, for instance, have built business models entirely around low Cost Structures.

Key questions

- What are the most important costs inherent in our business model?
- Which Key Resources are most expensive?
- Which Key Activities are most expensive?

Therefore it can be useful to distinguish between two broad classes of business model Cost Structures.

Classes of Cost Structure

cost-driven	value-driven
(many business models fall in between these two extremes)	
Cost-driven business models focus on minimizing costs wherever possible. This approach aims at creating and maintaining the leanest possible Cost Structure, using low price Value Propositions, maximum automation, and extensive outsourcing. No frills airlines, such as Southwest, easyJet, and Ryanair typify cost-driven business models.	Some companies are less concerned with the cost implications of a particular business model design, and instead focus on value creation. Premium Value Propositions and a high degree of personalized service usually characterize value-driven business models. Luxury hotels, with their lavish facilities and exclusive services, fall into this category.

Cost Structures can have the following characteristics

Element	Description
Fixed costs	Costs that remain the same despite the volume of goods or services produced. Examples include salaries, rents, and physical manufacturing facilities.
Variable costs	Costs that vary proportionally with the volume of goods or services produced. Some businesses, such as music festivals, are characterized by a high proportion of variable costs. Economies of scale Cost advantages that a business enjoys as its output expands. Larger companies, for instance, benefit from lower bulk purchase rates. This and other factors cause average cost per unit to fall as output rises.
Economies of scope	Cost advantages that a business enjoys due to a larger scope of operations. In a large enterprise, for example, the same marketing activities or Distribution Channels may support multiple products.

Metodo della break even analysis o del punto di pareggio

Consiste nell'individuazione della quantità di prodotto che è necessario vendere per realizzare il pareggio dei costi e dei ricavi connessi a uno specifico progetto.

Per esempio

- ▶ $PV = 200$
- ▶ costi fissi, $CF = 2000$
- ▶ costo variabile per unità di prodotto, $CV = 120$

Ricavi totali = Costi Totali

$$Q \times P = Q \times CV + CF$$

$$Q \times (P - CV) = CF$$

$$Q = CF / (P - CV)$$

$$Q = CF / MC$$

$$Q_p = 2.000 / (200 - 120)$$

$$Q_p = 25$$

Break even point:

Quantità di pareggio $Q_{\text{beap}} = CF / (P - CV)$

Margine di contribuzione

Precisazioni:

- ▶ Finché $\text{PREZZO} > \text{COSTI VARIABILI}$ conviene vendere
- ▶ Dovendo scegliere tra due prodotti A e B conviene scegliere il prodotto con **MARGINE DI CONTRIBUZIONE** superiore
- ▶ Margine di contribuzione unitario resta costante al variare delle quantità (P-CV)
- ▶ Margine di contribuzione totale aumenta con l'aumentare delle quantità

Condizioni di esistenza

- $P > CVU$
- $Q^* < \text{Capacità produttiva}$
- $Q^* < \text{Domanda potenziale acquisibile}$

* Sistemi di Controllo Analisi economiche per le decisioni Aziendali – Antony Merchant McGraw-Hill

Estensione del modello per il conseguimento di un risultato operativo (profitto o perdita) prefissato

Es. Costi fissi	2.000
Prezzo unitario	100
Costo variabile produzione	60

Quale quantità da produrre per avere un risultato operativo pari a 1200 euro ?

Estensione del modello per il conseguimento di un risultato operativo (profitto o perdita) prefissato

Es. Costi fissi	2.000
Prezzo unitario	100
Costo variabile produzione	60

Quale quantità da produrre per avere un risultato operativo pari a 1200 euro ?

$$Q_{\text{beap}} = 2000 / 40 = 50$$

Per una vendita di soli 40 pezzi = perdita di 400

Da cui la formula più generale $Q_{\text{ro}} = (CF \pm RO) / MC$ valida sia per profitti che per perdite

$$Ro = Mc \times Q - CF$$

Relazioni circolari costo-prezzo

ESERCIZIO

**L'impresa Alfa ha costi fissi pari a 1.800 € e costi variabili pari a 60€, mentre l'impresa Beta ha costi fissi pari alla metà e costi variabili pari al doppio dell'impresa Alfa.
Se il prezzo di vendita è pari a 180€ ed è uguale per tutte le imprese, il punto di pareggio (break even point) dell'impresa Beta sarà:**

- A Superiore del 50% dell'impresa Alfa**
- B Superiore del 100% dell'impresa Alfa**
- C Inferiore del 50% dell'impresa Alfa**
- D Uguale a quello dell'impresa Alfa**

THE BUSINESS
MODEL ANALYST

businessmodelanalyst.com

Path number 5: analyze the product or service meaning

What is the meaning of product-service in the consumer's life?

Cemex

Creates the emotional cement replacing the “quinceañeras” into a system oriented to save money to build up your house (“tandas”*)

***Tandas** are social mechanism according to which different families create a common moneybox that is distributed monthly with a draw. This amount of money was dedicated to the baptism or wedding organization

Ripensare alla Supply chain per innovare il Business Model: un case study

Il prodotto (cemento) è una commodity ...
Il time-to-market è elemento essenziale per il successo dell'impresa

Ripensare alla Supply chain per innovare il Business Model: un case study

Da “il cemento **dove** vuoi” a
“il cemento **quando** vuoi”
